1. Epics & User Stories Summary Table

Epic	User Story ID & Summary	User Story Statement (As a / I want / So that)	Priority	Story Points	Target Sprint
Epic 1: Service Registration & Catalog	Story 1.1: Register a microservice	As a DevOps Engineer, I want to register a new microservice with its endpoint, owning team, and dependencies, so that it appears in the central catalog.	High	5	Sprint 1
Epic 1: Service Registration & Catalog	Story 1.2: Update service metadata	As a DevOps Engineer, I want to update a registered service's metadata, so that the catalog stays accurate as ownership changes.	Medium	3	Sprint 1
Epic 2: Health Monitoring & Alerting	Story 2.1: View live health dashboard	As a DevOps Engineer, I want to see each service's rolling 24-hour availability, so that I can spot degraded services at a glance.	High	8	Sprint 1
Epic 2: Health Monitoring & Alerting	Story 2.2: Configure alert rules	As a DevOps Engineer, I want to set the alert channel and threshold per service, so that I'm notified through the right channel when something breaks.	High	5	Sprint 2

Epic	User Story ID & Summary	User Story Statement (As a / I want / So that)	Priority	Story Points	Target Sprint
Epic 2: Health Monitoring & Alerting	Story 2.3: Receive downtime alert	As a DevOps Engineer, I want to be notified automatically after 3 consecutive failed health checks, so that I can respond before customers notice an outage.	High	5	Sprint 2
Epic 3: Observability - Dependency & Documentation	Story 3.1: View dependency graph	As a System Architect, I want to see an interactive graph of service dependencies, so that I can assess the blast radius of an incident.	High	13	Sprint 2
Epic 3: Observability - Dependency & Documentation	Story 3.2: Browse aggregated API docs	As a System Architect, I want to view each service's OpenAPI documentation in one place, so that I don't have to hunt through separate repos.	Medium	3	Sprint 2

2. Simulation Screenshots

Screenshot 1: Jira Product Backlog with Epics, Prioritized User Stories, and Fibonacci Story Point Estimations

Screenshot 2 : Sprint 1 Active Scrum Board during sprint simulation

Screenshot 3: Sprint Burndown Chart demonstrating story point burn-down against the ideal guideline

3. Lab 2 Reflection Responses

- **Did your estimations reflect the actual effort?**

Yes. Stories involving complex rendering and data aggregation (e.g., Story 3.1 at 13 points and Story 2.1 at 8 points) reflected greater technical uncertainty and architectural dependencies compared to standard CRUD operations (Stories 1.2 and 3.2 at 3 points each).

- **Was your backlog well-prioritized?**

Yes. High-priority foundational capabilities (microservice catalog registration and core health probing) were ranked at the top to unblock subsequent alerting and visualization modules.

- **How did your simulated sprint align with your plan?**

The workload was partitioned evenly across two sprints (19 points in Sprint 1; 23 points in Sprint 2), preventing team overload while maintaining clear sprint goals across both iterations.

- **What insights did the burndown chart give about your team's capacity?**

The chart revealed step-function drops when completing large stories (8 and 13 points), indicating that breaking large epics down into smaller user stories (≤ 5 points) results in a smoother, more predictable burndown trajectory.
